NOTICE OF A SPECIAL ELECTION UPON THE QUESTION OF IN-CURRING BONDED INDEBTED-

Whereas, The City Council of Salt Lake City, Utah, by an ordinance duly passed by said Council on the 21st day of November, 1904, and appreced by the Mayor of said city on the 22nd day of November, 1904, and appreced by the Mayor of said city on the 2nd day of Sovember, 1904, did order a special election to be held in said city on the 2nd day of January, 1905, for the purpose of submitting to such qualified electors as shall have paid a property tax in said city in the year 1904, the question of incurring a bonded indebtedness in the sum of eight hundred and fifty thousand (\$55,000) dollars for the purpose of increasing the water supply of said city; and also the question of incurring a bonded indebtedness in the sum of one hundred and fifty thousand (\$150,000) dollars for the purpose of defraying the expenses of establishing sewer mains and a sewerage system in the southern and western portions of said city where no sewerage system now

sewerage system in the southern and western portions of Salt Lake City where no sewerage system now exists.

Sald water system and sald sewerage system shall be owned by Salt Lake City. Salt bonds shall bear interest at the rate not to exceed four (i) per cent per stnum, which interest shall be payable semi-annually, and said bonds shall become due and payable at the end-of twenty (29) years from the date of issue, with the option reserved to the city to pay or relind the same at any time after the expiration of ten (ii) years after the date of issue, and shall be of such denomination or denominations as the Council may hereafter determine, and the net revenues from said water system shall be set apart for and shall be a sinking fand for the payment of said bonds and interest thereon.

Said election shall be conducted according to the statutes and laws of Utah, and shall be held in manner and form provided thereby.

The report of a special committee here-

shall be held in manner and form provided thereby.

The report of a special committee heretofore appointed by the City 'Council to
examine into questions perturing to the
water supply of Sait Lake City and the
proposed horease of said saverage system which report was adopted by the
City Council of the Zist day of November,
1994, and approved by the Mayor of said
city on the Zind day of November, 1994,
immediately follows this mittee, and said
report is hereby referred to for more detailed information concerning said water
and said sewers and said proposed improvements. RICHARD P. MORKIS,

Mayor of said City.

Becorder of said City.

Sait Lake City, Utah, Nov. 17, 1984 To the Honorable President and Members of the City Council of Sait Lake City: Gentlemen:—Your special committee, to whom was referred the subject of devising a plan for obtaining an adequate wa-ter supply for Sait Lake City, reports as

Carelty, 15:
City creek 4,500,600 gallons
Parley's creek 4,200,000 gallons
Emigration creek 1,000,000 gallons

sources, per day of 24 hours, will be us follows:
Mill creek 7,609,000 gallons Hig Cottonwood creek 27,200,000 gallons Little Cottonwood crk 7,800,000 gallons

above named streams, which is now used for irrisation.

Two-thirds of the waters of Mill creek and Big Cottonwood creek are used on lands lying under the present city canal, and the quantity per day of 2h hours that can be procured by immediate exchange from those streams is as follows:

Mill Creek 5.109,000 gallons

Big Cottonwood creek 18,100,000 gallons

Total 11.000,000 gallons
The committee has assurances that leases can be obtained at a reasonable rental, for the waters which are used above the city cand, during the period from August 1 till the beginning of the next years' irrigation season.

Little Cottonwood creek does not appear in either of the last two tables for the reason that the committee is not in possession of the data showing the relative quantities of water from that source which are used above and below the present canal, but it is assumed that practically all of the Little Cottonwood water can be acquired either by exchange or lease whenever the necessities of the city may require.

To make the water of Mill creek and Big Cottonwood creek available, it is proposed to construct a conduit from the tail race of the Utah Light and Rallway company's lowest power station on Big Cottonwood creek to the mouth of Parley's canyon, which will discharge the water approximately 180 feet above the present intake of the Parley's canyon conduit, through which it will be conveyed to the city. This conduit has a capacity of over 20,00,00 gallons, while there is only about one-fourth that quantity of water available from Parley's creek during the low water senson.

season.

It is proposed to construct the Big Cotonwood conduit in a permanent manner of
sufficient capacity to deliver all the water
it is ultimately intended to obtain from
that stream and from Mill creek and Lit-

it is altimately intended to obtain from that stream and from Mill creek and Little Cattonwood creek, including a suitable connection for admitting the waters of Mill creek. The estimated cost of this conduit, complete, is \$359,000.00.

The report shows that in addition to the mountain sources above described, there is a supply which can be made awailable from what is known as Spring creek, which is a tributary of Big Cortonwood creek, forming a junction with the latter near Ninth East and Sevententh South streets, a point several miles below the proposed place of diversion into the Big Cottonwood conduit. At this place there is practically constant flow of about 14,000,000 gallons per day. An option has been secured, subject to your ratification, for the city to purchase this water for the sum of \$15,000.00.

In order to utilize the waters of Spring creek it is proposed by the Engineer to establish a power station at the mouth of Parley's canyon, where the water drops 189 feet from the Big Cottonwood conduit to the Parley's canyon, conduit, at a cost of \$90,000.00, and a pumping station near Spring creeks, which will pump the water to such an elevation that it can be delivered into the Big Cottonwood for which an exchange has been effected. The remainder of it to be conveyed as far north

whether the purity can be manutaness, and that careful examination may disclose the fact that a satisfactory title to this water cannot be obtained, and that for these reasons. It may not be designable to exercise the option to purchase Spring creek. The Engineer's report also shows that the city now has an ample supply of canni water from Utah lake, if supplemented by the Spring creek water, to furnish all the water that is required for exchange purposes, and that if, for any reason. Spring creek is not purchased, immediate provision should be made for securing at least an equivalent quantity of exchange water from Utah lake, and, at the same time, for perfecting the city's right in this important source of supply, and that this may be accomplished by the expenditure of the 215,020.00 named in the estimate for the purchase and pumping of Spring creek and will afford sufficient water to exchange for all the mountain streams, including Little Cottonwood.

He also recommends that, in any event, the term of \$40,000.00, for the proposed Parley's canyon power station, abould be retrined, as its value to the city would more than compensate for its eost in handling and disposing of sewage for the lower portion of the city, if not needed for pumping Spring creek witter.

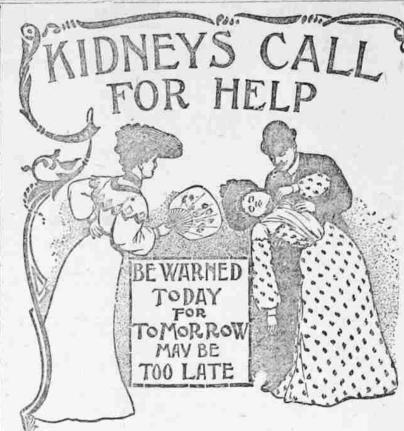

It also appears from the Engineer's report that, in addition to the amounts above given, there will be required for the parament of bonusees for exchange of water and repairs to the Jordan and Sait Lake City canal, 25,050.00, and for the purchase and extinguishment of power rights and miscellaneous expenses \$6,000.00, mixing a total of \$55,000.00.

The committee his been assured by the City Engineer that the above estimates also ample for the purposes mentioned, and so it seems reasonably certain that the city can acquire, for the total sum named, an increased water supply, delivered into its present reservoirs and learned for the present supply per capita for a population of 250.000.

The city has already secured, by exchange, 1,500.00 gailons per 24

capita for the 65.00 water users now in the city. The Engineer gives it as his opinion that 200 gallons daily per capita, as an average supply, would be none too much.

From the report it appears that the quantities of water that can ultimately be made available from the mountain that a proposition be submitted to the tax.

dulgence in stimulants.

The kidneys are the blood filters, and when they become sick, the blood is soon laden with impurities, which the kidneys have falled to remove. This causes backache, siff, lame, and sore

no time to love. Kidney diseases are common and fatal—cause more deaths kidneys.

But in nine cases out of ten this is due to neglect. Kidney disorders are easily contracted, but just as easily cured when treated property and in time.

Common causes of kidney troubles are colds, favers, exposure, strains on the back, blood-poisoning diseases, and induserse in stimulants.

stage except a medicine that cures the kidneys.

There is one remedy which never falls to cure sick kidneys—Doan's Kidney Pills. This specific helps the kidneys ever to take out all the kidney poisons. Its effects are lasting. Hundreds of cures have been made by Doan's Kidney Pills in this city, and many grateful people testify. Here's one home case:

Salt Lake City Proof

Mrs. Robert C. Kirkwood, residence 424 West 4th South, says: "An adver-tisement in a Salt Lake City pap., about Doan's iKdney Pills so impressed muscles, aching joints, spells of dizziness, headaches, rheumatic pains, sieeplessness, nervousness, and languer, weak heart and many other bodily aches and ills.

Feanwhile the kidneys are fast breaking down, and from this cause the uriae becomes discolored and full of sandy sediment; passages are too frequent, and often reinful.

Mrs. Robert C. Kirkwood, residence to the most of the same that I asked Mrs. Rirkwood to call at the F. J. Hill Drug Co.'s store for a box. After an attack of the grlp my kidneys were weakened and easily affected. The pain centered in the small of the back and was particularly seuent, and often painful.

Urlo acid crystallizes and causes gravel and kidney stones. The bladder cannot perform its natural duties. Water which should pass off in the urine collects in different parts of the body, causing dropsical bloating.
